**WATER PLANT**

## An Essential Appliance for the 21st Century

The Water Plant removes the impurities from your water, leaving you with fresh, clean, odor-free water that tastes great, and reduces hardness scale.

### #1 SEDIMENT & TURBIDITY FILTRATION

**The first stage of treatment is a sediment prefilter.** The primary purpose for this step in the process, as you might have guessed from its name and function alone - is to filter out any pesky sand or sediment that could reduce efficiency during later stages.

### #2 CATALYTIC CARBON MG

**The only carbon available in the market that is both highly-activated and regenerable.** Catalytic Carbon has been enhanced with catalysed iron hydroxide, which means it can adsorb contaminants that have a negative charge - making this your best choice for removing unwanted substances and forever chemicals like PFOAs from your water.

### #3 THE COMBINED TREATMENT OF CT & SP3

**Water flowing through the CT/SP3 media develops an ionic charge which binds the water hardness elements together,** preventing them from sticking to your faucets and appliances.

### #4 ELECTRONIC DESCALER

**The Water Plant Descaler induces a continuous electronic sine wave into the water** that creates an electrochemical reaction, dissolving limescale in the water.

CT/SP3

1

### PRE-FILTER

Dirt, sand, grit, rust and other particles are removed.

2

### CONTAMINANTS REMOVAL

Chlorine chemicals, organics, odors, PFOAs, heavy metals are removed.

3

### WATER HARDNESS TREATMENT

This filter media will reduce the scale of calcium, magnesium, sulfates, silicates including phosphates.

4

### SCALE REMOVAL & PROTECTION

Creates an electrochemical reaction which dissolves limescale in the water.

## HOW LONG DOES IT LAST?

Every home or business will have different water usage rate/volumes that will impact filter life. Generally, the system will not "stop" flowing water, however gradual reduction in flow may be noticeable at some point. These guidelines will provide a basis for filter life expectations.

1 Depending on the type and amount of sediment in your water, the frequency with which you'll need to replace your sediment filter will differ. If you notice a slow decline in performance, it's probably time for a new filter. They're inexpensive and easy to change, so there's no reason not to keep one on hand.

2 The Catalytic Carbon filter is suggested to be replaced once a year, depending on the volume of water used and the amount of contaminants it catches. If you notice any issues with the taste or odor of your water, this is an indication that you may need to change the filter.

3 The CT & SP3 filter has a lifespan of three to five years.

4 The electronic descaler comes with a one-year full replacement warranty, but it is built to last for several years with no issues. If the blue lights are on, it's working!

## The Best Water for Your Home or Business

Today's drinking water has a new set of challenges that your grandparent's didn't have to deal with. Forever chemicals are all around us and constant exposure has adverse side effects for our health. The Water Plant transforms your questionable tap water into something you can feel good about while drinking, bathing and washing dishes.

If you're concerned about the quality of your tap water, The Water Plant is the perfect solution. We remove contaminants and impurities, leaving you with clean, odor-free water to drink. You'll never have to worry about forever chemicals or other harmful toxins again. **The Water Plant gives you the peace of mind that comes with knowing you're drinking the best water possible.**

### WATCH-WATER®'S EXCLUSIVE WEST COAST PARTNER

The patented, proprietary media we use in our products is developed by the world's leading water treatment company, Watch-Water® with its headquarter in Mannheim, Germany. Watch-Water®'s media in our products reduces unhealthy conditions from treated water. We're proud to use Watch-Water® products.

**40+ years experience in the water filtration industry.**

**Locally owned and operated in Longview, Washington.**

**Environmentally friendly and sustainable products.**

**60-day buy-back guarantee on our products.**

# We're Committed to Great Water

Aquacentrics is a next-generation water filtration company that is developing renewable solutions for homes and businesses. Our mission is to provide our customers with the highest quality water filtration products and services available, while also preserving our environment. We are committed to providing our customers with the most effective and efficient water filtration products possible, while keeping our planet healthy for future generations.

## READY TO GET STARTED?

Transform your tap water into crystal clear, great tasting water that leaves your dishes sparkling clean.
